Updated Risk Assessments to minimise the risk of being exposed to Covid-19

Version History
Version 1.1 prepared by Anna Eagleton (24.08.20)
Version 1.2 prepared by Anna Eagleton (24.02.21)

The process involved consultation with all school staff.

Methodology used for hazard identification and control

In line with the requirements of Safety, Health and Welfare at Work Act 2005 (section 19) it is the policy of the BoM in Kilcolgan Educate Together to address significant hazards and risks in the workplace, to access the risks to safety, health and welfare and to control these risks as far as is reasonably practicable.

The Board is committed to the ongoing identification of hazards, the assessment of the appropriate risks and the introduction of controls to deal with them. In addition, staff are involved and participate in safety, health and welfare issues within the school and are encouraged to identify and report any potential hazards that may exist and to ensure that a risk assessment is carried out.

This revised Risk Assessment includes all relevant updates and necessary control measures to minimise the risk of staff and others being exposed to Covid-19 and these will be incorporated into the Safety Statement for St. Projects in line with requirements of section 20 of the 2005 Act.

It is envisaged that additional reviews will be undertaken on a regular basis and in line with Government and public health advice to ensure that all information remains accurate, that controls are appropriate and where necessary risks are reassessed.

A hazard is anything with the potential to cause harm to the safety, health or welfare of staff, students, visitors and contractors – a wet or slippery floor, an unguarded machine, stressful work, a blocked entrance, hazardous chemicals etc. Hazards may be classified as physical, chemical, biological, environmental or human.

A risk is the likelihood that someone will be harmed by a hazard and the severity of that harm.

Control measures:

A control measure is an applied measure that reduces the level of risk. Control measures can be applied at the planning stage, can comprise physical measures, can be management issues and can include training. Good control measures will require a combination of some or all of these.

Control measure principles:

Schedule 3 of the Safety, Health and Welfare at Work Act 2005 lists the Principles of Prevention and the Board of Management undertakes to apply these principles (where practicable) in dealing with all risks within the school:

- Avoidance of risks
- Evaluation of unavoidable risks
- Combating of risks at source
- Adaptation of work to the individual
- Adaptation of workplace to technical progress
- Replacement of dangerous articles, substances or systems of work by safe or less dangerous articles, substances or systems of work
- Priority to collective protective measures over individual protective measures
- Development of an adequate prevention policy which takes account of technology, organisation of work, working conditions, social factors and the influence of factors relating to the working environment
- Appropriate training and instructions to employees.

When the safety audit identifies hazards, it is necessary to evaluate and rank them so that they can be controlled in an orderly way. The risk of a hazard is a measure of the likelihood or probability of an accident coupled with the severity of the injury or loss. The risk potential of each hazard was assessed (by ranking) by giving numerical values of between 1 and 5 to both the **severity** of the consequences and the **probability** of the event occurring. When the severity numerical factor and the probability numerical factor were multiplied together, they produced a number between 1 and 25 thereby producing the numerical values outlined in **risk rating** chart below.

Severity x Probability = Risk Rating

Severity

Severity Rating	Interpretation	Numerical Value
Fatality or Catastrophic	Single or multiple fatalities, widespread illness, large scale property or equipment damage	5
Major	Serious injury or illness, significant property or equipment damage	4
Moderate	Injury and damage to property	3
Minor	Minor injury or illness, minor property or equipment damage	2
Trivial	No significant injury or illness, no significant property or equipment damage	1

Probability/Likelihood

Probability Rating	Interpretation	Numerical Value
Inevitable	Likely to occur either immediately or in the short term	5
Very Likely	Could occur in time or if repeated enough	4
Likely	Likely to occur	3
Unlikely	Though unlikely, may occur over time	2
Rare	Unlikely to occur at all	1

Risk Rating

Numerical Value Severity x Probability	Descriptive risk rating	Interpretation

The designated area and the route to the designated area should be easily accessible and as far as is reasonable and practicable, should be accessible by people with disabilities. The possibility of having more than one person displaying signs of Covid-19 needs to be considered so having additional isolation areas available or another contingency plan for dealing with additional cases must be planned. It would be important that the designated area has the ability to isolate the person behind a closed door and away from other workers If a staff member or student displays symptoms of Covid-19 the following procedure is to be implemented: ✓ Isolate that person and have a procedure in place to accompany the individual to the designated isolation area via the isolation route, keeping at least 2 metres away from the symptomatic person. The accompanying adult will also make sure that others maintain a distance of at least 2 metres from the symptomatic person at all times. ✓ A mask will be worn by the accompanying adult and will also be provided to the person presenting with symptoms if one is available. The masks should be worn by both parties for the duration or if in a common area with other people or while exiting the premises. ✓ An assessment will be made as to whether the individual who is displaying symptoms can immediately be directed to go home and call their doctor and continue self-isolation at home. ✓ The person presenting with symptoms will remain in isolation if they cannot immediately go home and all efforts will be made to facilitate them calling their doctor. The individual should avoid touching people, surfaces and objects. Advice should be given to the person presenting with symptoms to cover their mouth and nose with the disposable 	-	Principal
